

LaneLight

Typical applications

Dynamic
'contraflow'
lane marking

Left hand turn
lane delineation
with 'chasing'
effect during
green signal
phase

Automatic fog
detection with
dynamic traffic
speed pacing
effect

LaneLight markers produce a bright, daytime-visible light - focused directly in the driver's line of sight - that clearly indicates the curve, hazard, crosswalk, variable lane, or lane edge, and requires no interpretation by the driver. This increased visibility results in enhanced safety and is far more effective than warning beacons or signage.

LaneLight markers emit 1.35 million candela per m² - by far the highest light output of any in-road light module available.

Intelligent features such as addressable chips and special logic controllers provide functions such as fog or tunnel traffic pacing, traffic allocation, and in-road variable message signage (VMS).

MUTCD compliant.

LaneLight

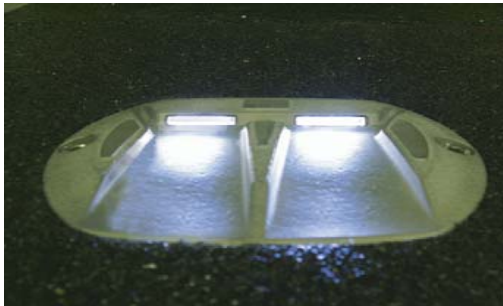

The world's most advanced
in-road LED systems

www.lanelight.com

LaneLight

In-road LED marking systems

- Flat profile in the road
- Industry leading ultra-bright LED output
- 1.35 million candela/m² for full daytime visibility
- Automatic night dimming
- Bike- and pedestrian-safe

Solar power option

- Environmentally friendly
- Low power consumption

Safer Streets & Highways

- Directly in the line of sight
- No interpretation of their meaning
- Motorists can't miss it, react faster!

Maintenance-free design

- LaneLight's proprietary, direct burial IMSA control cable has shielded, insulated conductors, surrounded by an innovative dry, water-blocking material, to provide years of trouble free service.

Auxiliary circuits allow for the connection of pushbuttons or other devices without running additional wiring.

Snowplow-safe

- Even the most aggressive snowplowing won't damage a low profile, stainless steel LaneLight!
